### **Seamless transition between the two worlds**

Ease of use and an almost seamless transition between the two worlds is attainable as a result of the design of the application: Graphics and embroidery editing component of the application have a common user interface. As a result, a user that is familiar with CorelDRAW will be sure to find the stitch side equally easy to learn and to use.

### **Increased productivity**

By using Wilcom DecoStudio© e1 any design can be created using approximately 25% fewer stitches due to special algorithms that are used internally within the software. This also results in fewer thread breaks, less machine down time and ultimately better quality.

### **Advanced Monogramming wizard**

An advanced monogramming wizard takes the designer through the various element of creating the perfect looking monogram, from specialized monogramming fonts that can be enveloped to adding decorative arabesque ornaments.

### **Pre-digitized Embroidery Fonts**

DecoStudio© e1 includes 30 high quality embroidery fonts designed specifically for stitch purposes. You don't need to be concerned about the quality of the conversion of TrueType fonts into stitches; This is the perfect solution for small lettering

### **Advanced industrial Appliqué features**

By using the advanced Appliqué features within DecoStudio© e1 the designer has greater control over the finished product. This includes tight integration with the sew file as well as the final stitch file. Also, as a result of the design being created on the graphics side, the designer also has access to the actual vector information required to sent to a fabric cutting device.

### **Print, Stitch, Cut, Engrave from one single file!**

Wilcom DecoStudio© e1 incorporates graphics and stitch in one application to provide the user with the ability to create designs that consist of a combination of many elements. For example, you can combine vector graphics and a stitched simulated graphic printed on a DTG (Direct to Garment) printer, or combine in a single garment various techniques like screen printing and embroidery.

Ability to create different embroidery types from vector graphics objects within your multidecoration project  
Wilcom DecoStudio© e1 allows you to convert individual objects within a single vector file to a variety of different stitch output types, such as emblems, appliqué or fonts.

### **Vector Editing Stitch Objects**

In Wilcom DecoStudio© e1 the designer has the ability to perform vector editing directly on the stitch side of the application and get a realtime preview as to how the finished project will look. This will eliminate the need to export your stitch file to an external program that may have limited editing capabilities.

**DecoStudio** *e1*  
a CorelDRAW product

## Reasons for Corel® DRAWings® users to purchase Wilcom® DecoStudio *e1* - cont.

### **Easier management of stitch sequences**

Using the Object Manager (Color-Object List) docker in the embroidery side of DecoStudio© *e1*, the designer can easily re-sequence a design into an almost natural flow thereby reducing machine wait times and increasing performance.

### **Wide variety of file formats**

With Wilcom DecoStudio© *e1* the designer has the ability to import a wide range of file formats (vector and stitches) allowing you to combine stitch files from various sources, edit and re-use a stitch file; or convert a stitch file into vector graphics to use them for commercial printing.

### **What happens to my DRAWings hardware key (dongle)?**

For a limited time we will not require to send in your Corel DRAWings hardware key if you purchase Wilcom DecoStudio© *e1*. The new product includes a new USB hardware key that is required to start Wilcom DecoStudio© *e1*.
